

# Exclusive Offer Bed Wedge Pillow from Putnam's

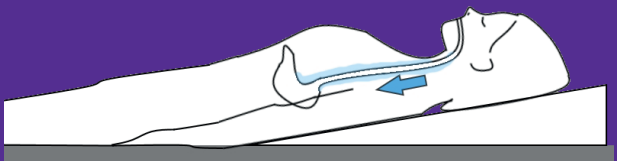

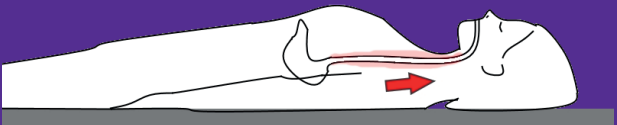

Oesophageal and Gastric Cancer Support

# Putnams

Both doctors and the practitioners agree a wedge pillow can help to relieve the symptoms of Acid Reflux (also called Gastro-Oesophageal Reflux Disease, or GORD) and heartburn by elevating your torso to prevent acid from burning the lining of your oesophagus while you sleep. Using a bed wedge to elevate your upper half can severely reduce acid reflux. Just adding extra pillows won't work because they elevate your head, not your upper torso.

**This triangular bed pillow gently tilts your torso reducing acidic discomfort during the night.**

**Stops acid reflux naturally.**

# Goodnight Acid Reflux, Hello Sleep!

We are extremely hopeful that this initiative will help sufferers to sleep more comfortably, we are very grateful to Putnams for their generous discount.
